About Me

I am Jareth Mena, a Backend Software Engineer with a focus on developing, maintaining, and creating processes to ensure high-quality software delivery.

My main mission is to create efficient and sustainable software solutions that add significant value to the company while promoting a culture of continuous learning and improvement among team members. I strive to stay aligned with ongoing technological advancements, enhancing my skills as a backend developer.

A software engineer is not just someone who masters numerous technologies or knows every detail of a programming language by heart, but someone who forges their own path to solve problems. While technical knowledge can be acquired with time and patience, determination and ingenuity are what truly sets an engineer apart.

Work Experience

National Instruments
Fullstack Software Engineer

Since May 2023, Current Position

Worked extensively on backend-related tasks within the Software Licensing team.

Successfully researched, documented, migrated and modernized critial internal Java legacy applications.

Led the modernization project for the internal licensing portal, from initial planning through tech stack proposal to actual development. This project involved frontend development.

Created comprehensive test plans and compiled test data to ensure the quality of software solutions.

Accenture
Quality Assurance Engineer

From January 2022 to May 2023

Spearheaded the Automation Testing Initiative for the account I was part of.

Developed and implemented Selenium automated testing suites across more than 10 websites for a major client.

Introduced an Audit Automation Process that streamlined operations across the entire account.
